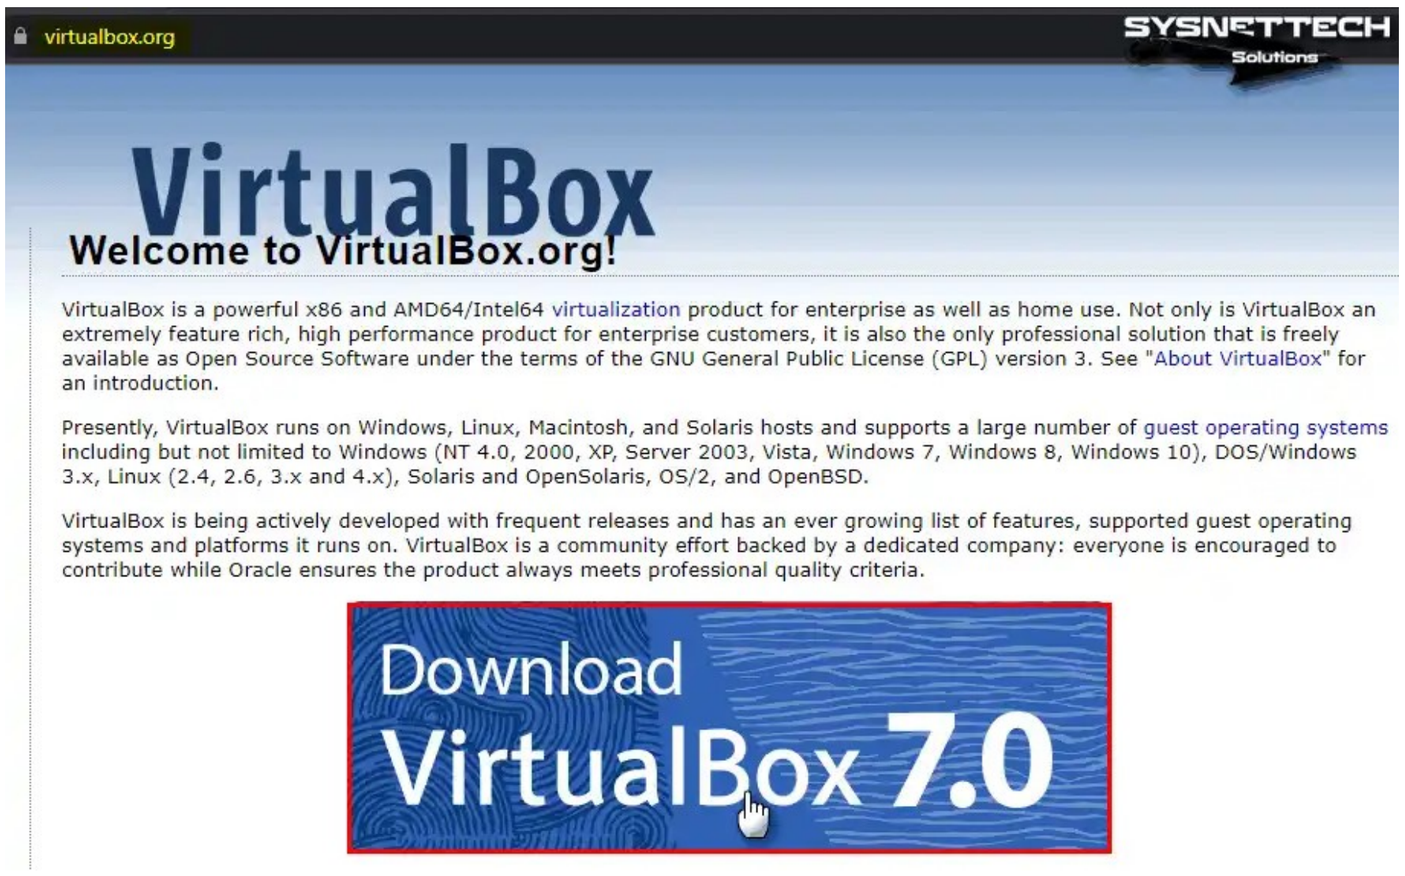
Install and configure Virtual Machine virtual box installation steps and screenshots document

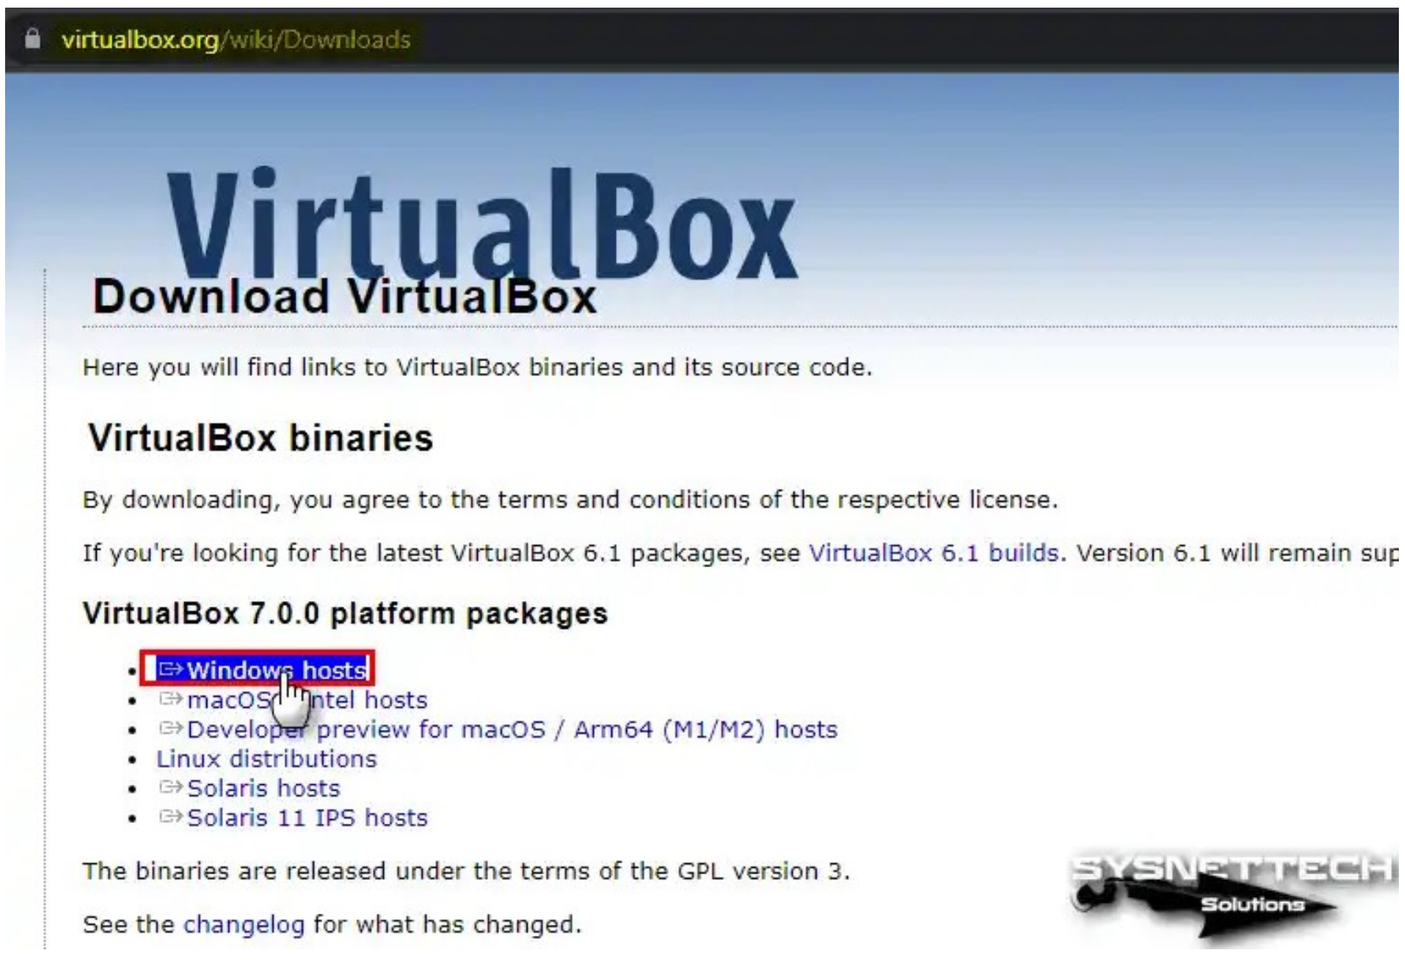
Step 1

To download the Oracle VM program, visit the official website by clicking this link, then click the Download VirtualBox 7.0 image on the open website.



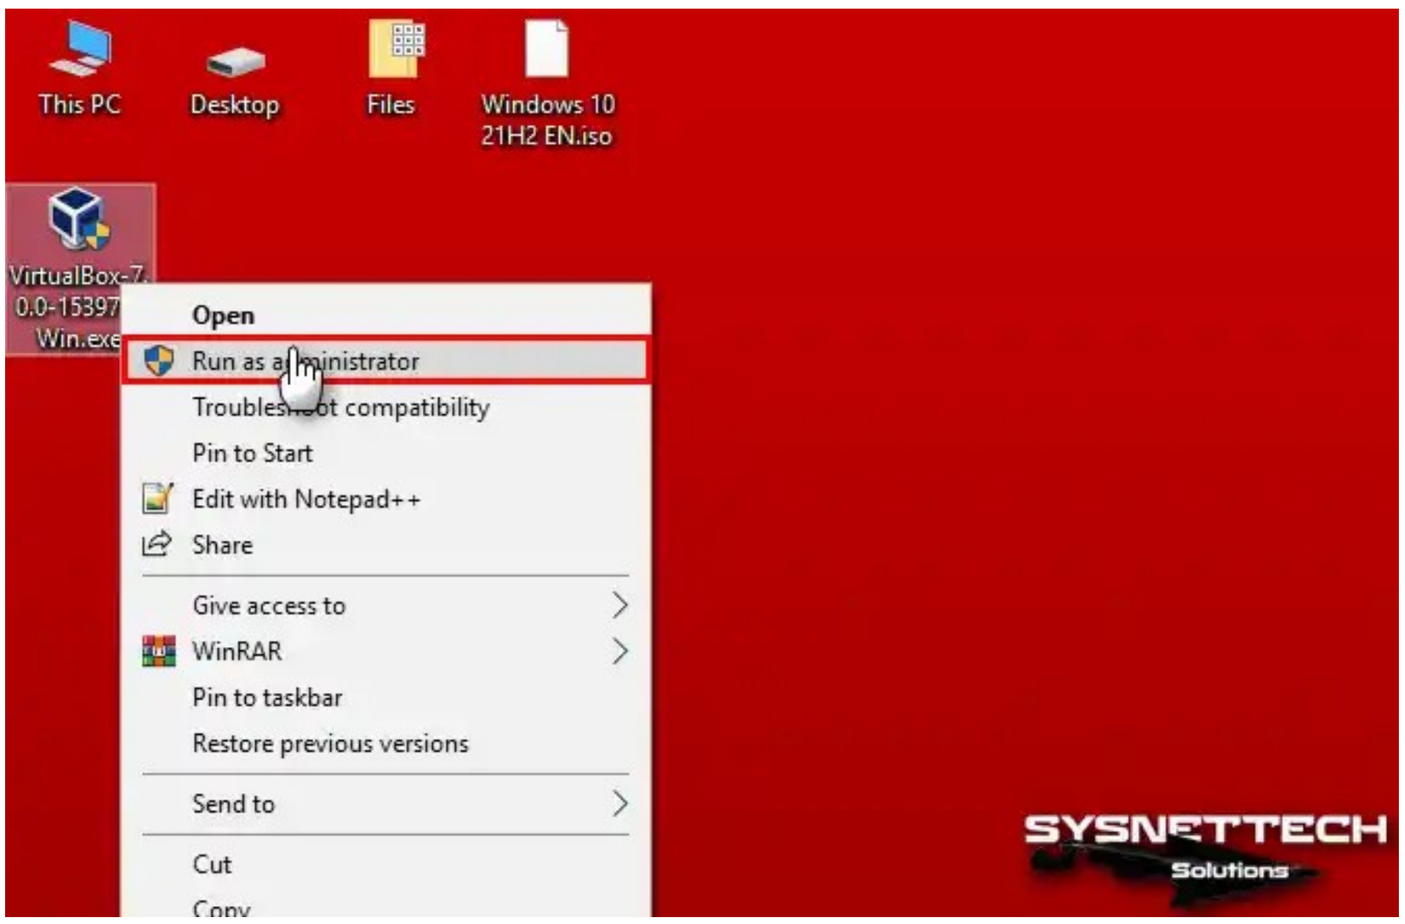
Step 2

When the web page containing the platform packages opens, click on the Windows Hosts link.



Step 3

When you download the VirtualBox.exe file, run the file as an administrator according to your system criteria.

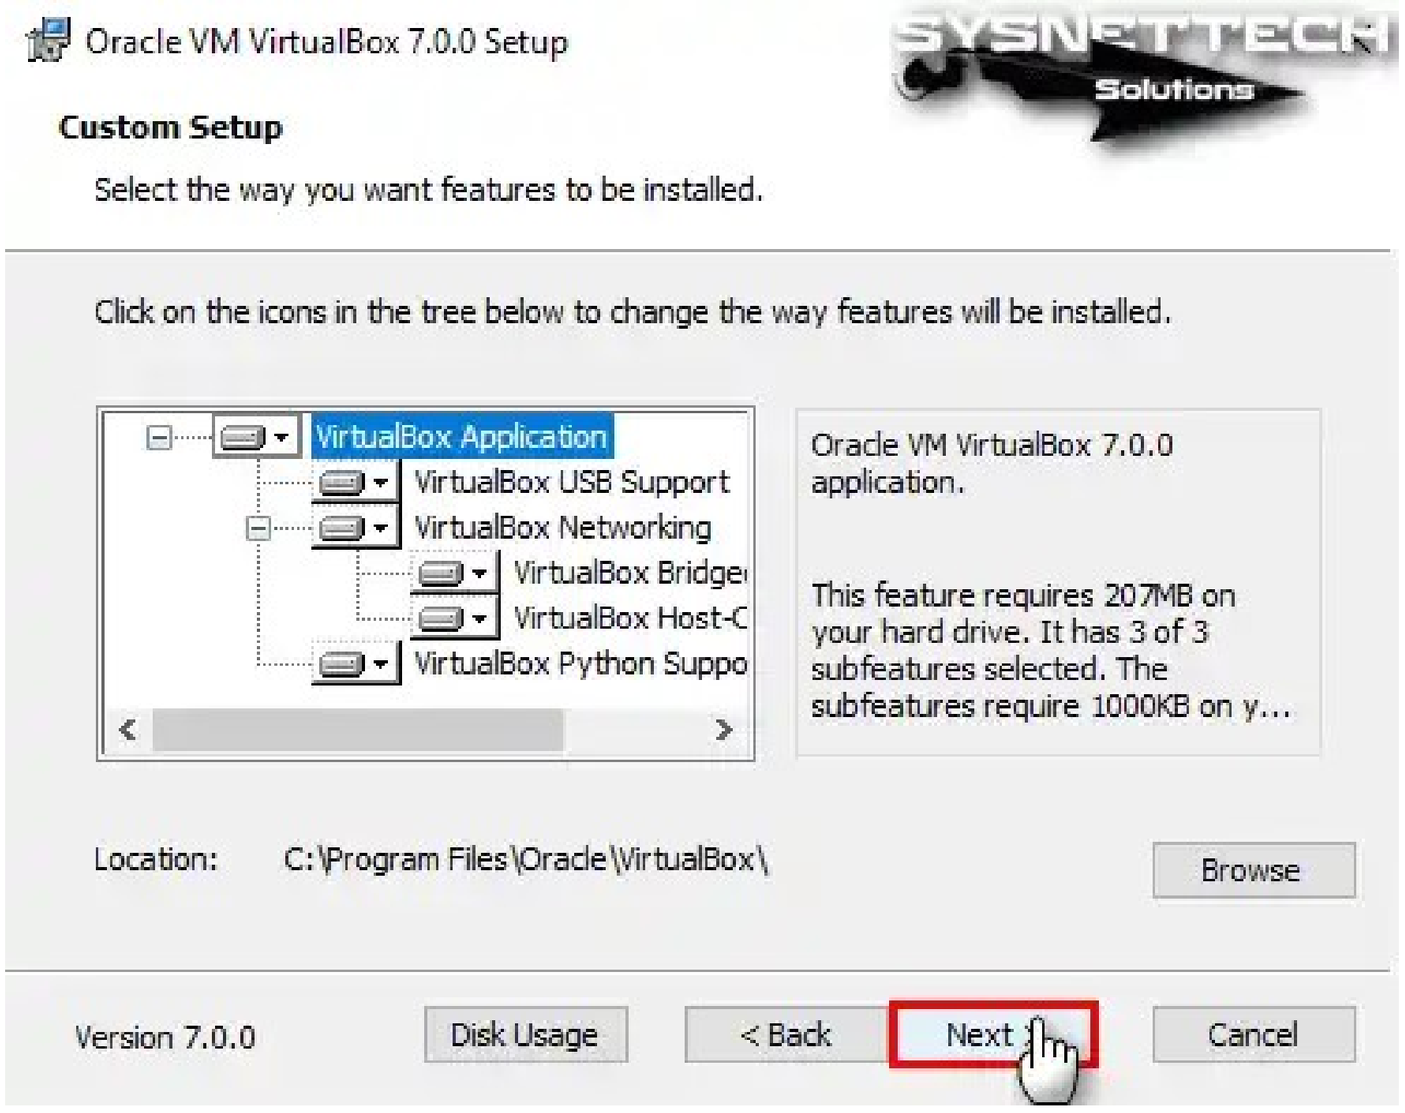


Step 4

When the Oracle VM software wizard opens, click Next to continue the installation.

Step 5

To disable some VirtualBox-related features in the Custom Setup window, change the settings and click Next.



Step 6

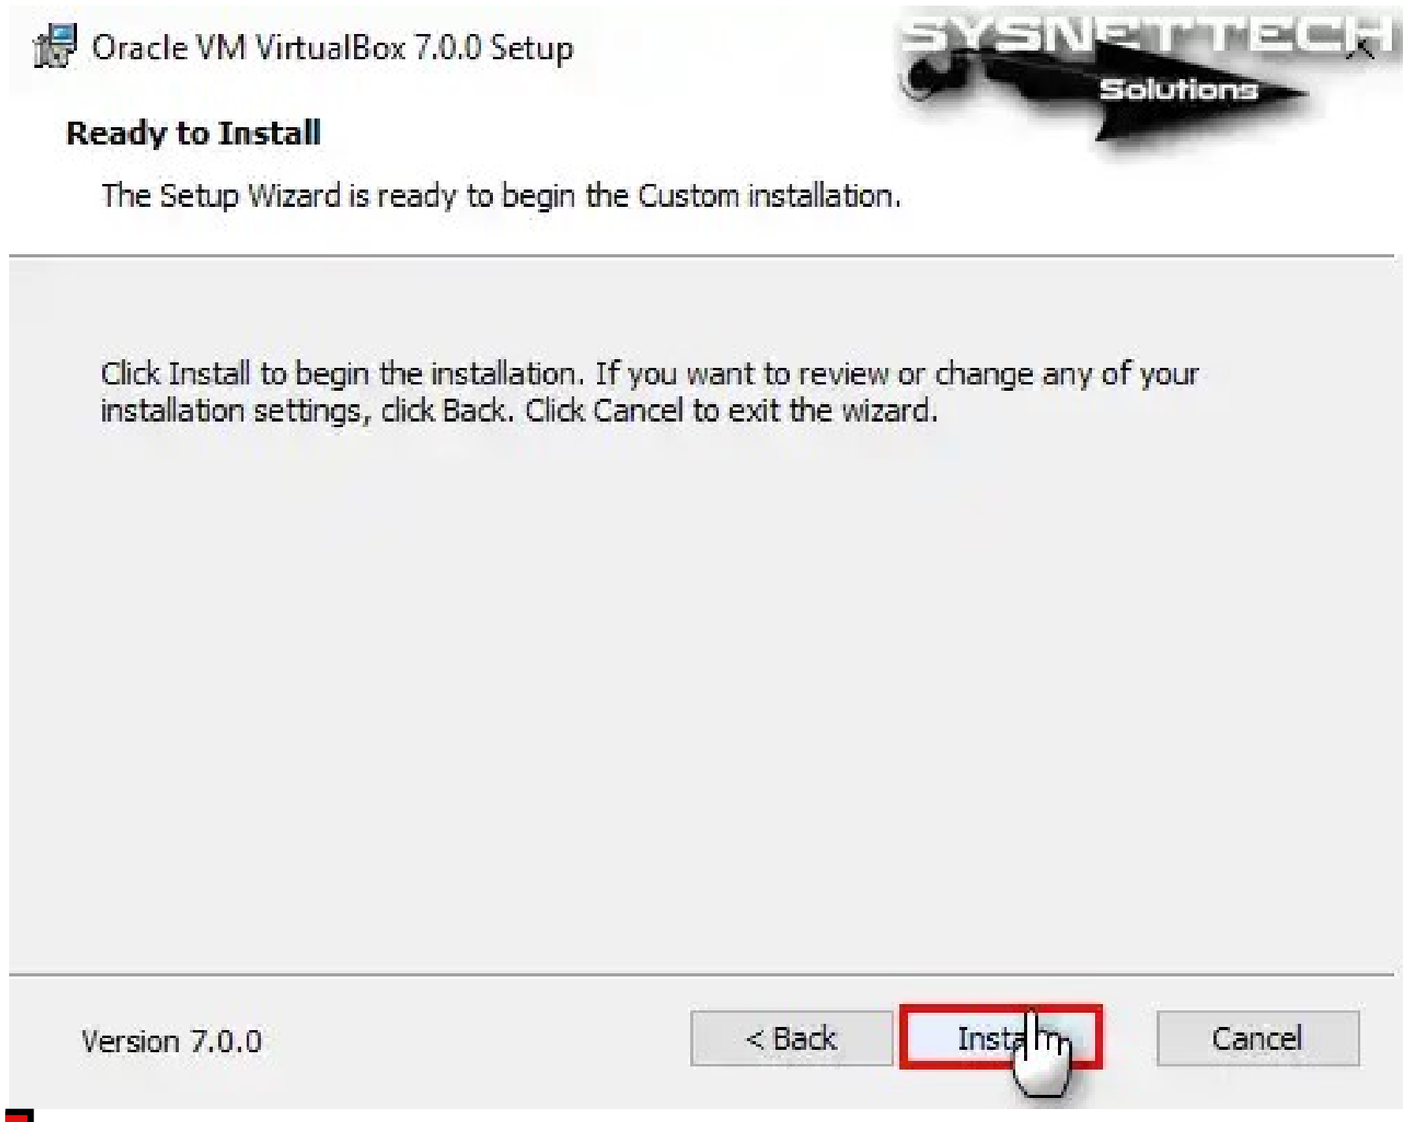
In the window, click Yes to acknowledge that the installation will briefly disconnect the network adapters on your PC.

Step 7

Click Yes in the Missing Dependencies Python Core / win32api warning window and continue. You can bypass this error and continue with the installation. Still, you can look at this article to install the win32api extension.

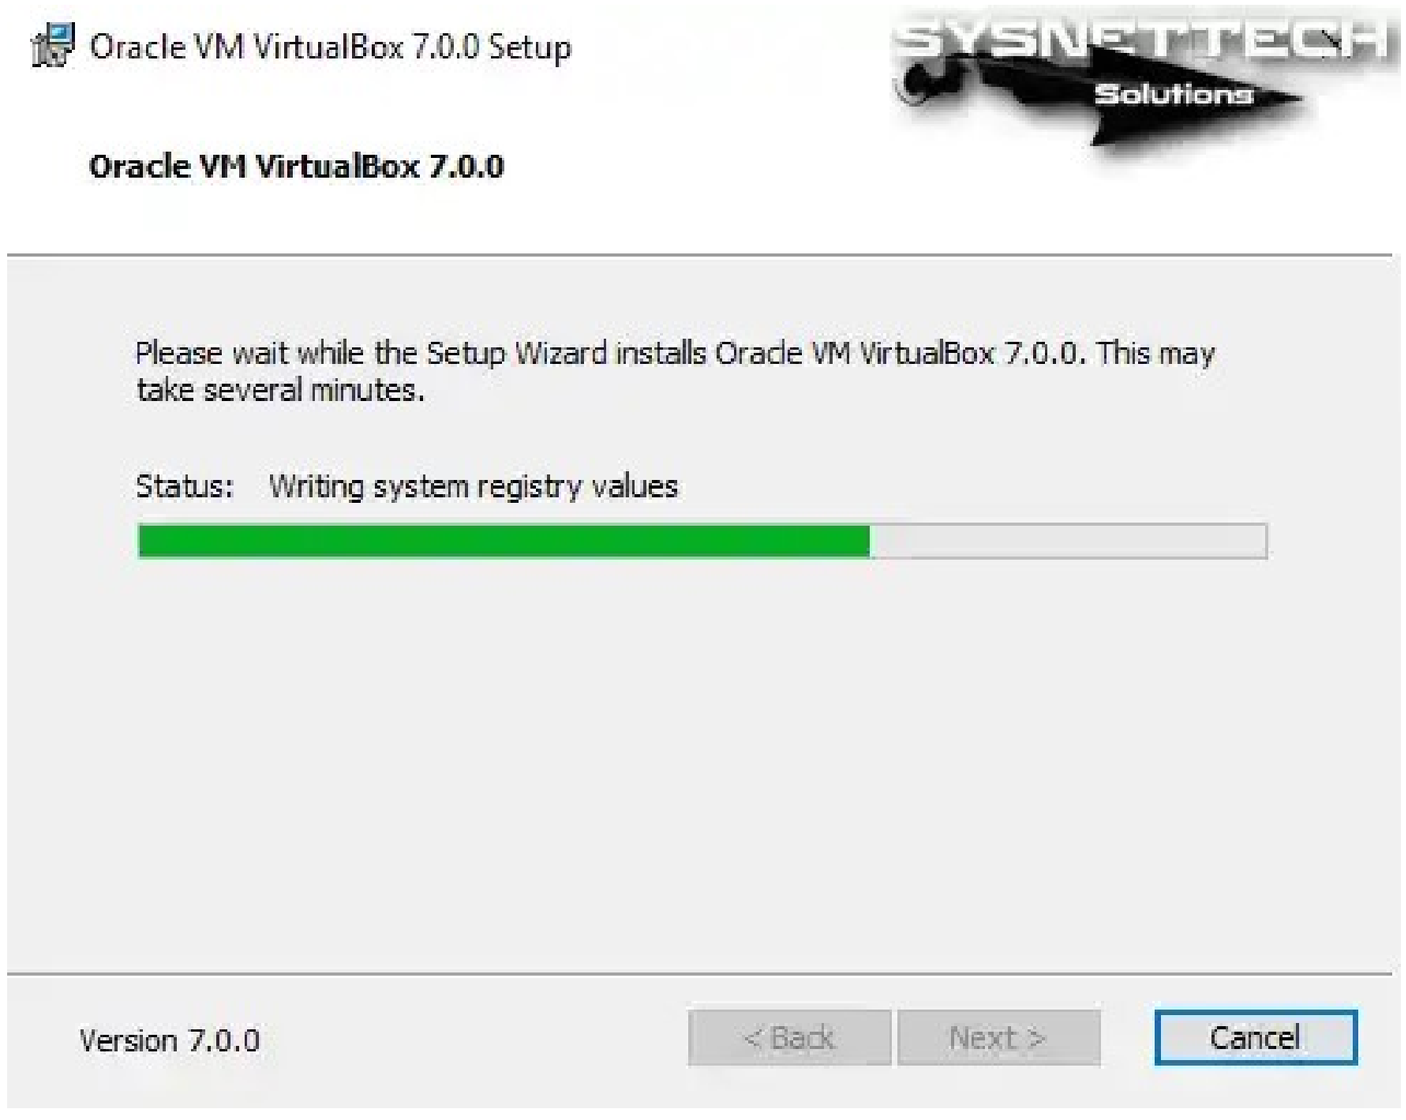
Step 8

Click the Install button in the wizard when the download is complete. If you want to change a stage, click Back and adjust your desired locations.



Step 9

Please remain patient as the Oracle virtual machine software installs on your system.



Step 10

When installing VirtualBox 7.0, ensure not to deselect the appropriate option for running the program and click Finish.

Step 11

When you open Oracle VM Manager, you can open the Help / About window from the tool menu to check its version.
